

Preventative Maintenance

Preventive Maintenance & Inspection Program

Integrity Crane Services, Ltd preventative maintenance program is custom developed for your cranes. It will help you get optimum use of your lifting equipment and will meet all applicable OSHA requirements. The right amount of preventive maintenance will save you money in less equipment downtime and costly emergency repairs and breakdowns. Field proven preventive maintenance methods are utilized on cranes, generating a constant, measurable reduction on overall customer maintenance costs.

This custom program saves you money by:

- Avoiding costly down time
- Catching wear items before they become breakdown problems
- Extending the lifetime of the crane and it's accessories
- Reducing your overhead on special lubricants, tools and parts
- Maintaining a permanent record of your crane/hoist maintenance, as required by OSHA
- Performing adjustments and minor maintenance, thus reducing service calls and in-house maintenance costs
- Reducing long-term maintenance costs by repairing small problems before they grow into costly repairs

This P.M. & inspection program includes inspecting & servicing of:

- All components requiring lubrication
- Control station and wireless controls, for operation and safety function
- All wear items, for signs of fatigue or excessive wear
- All structure and supports, visually for failures
- Hook and lifting devices
- Load chains and wire ropes
- All limit switches and safety devices
- Motor brake, for operation and adjustments
- If any of the above items require immediate service, our technicians will perform minor adjustments and any lubrication as needed. Preventive maintenance service includes lubrication materials. **Integrity Crane Services, Ltd** will submit a record of the inspection and maintenance for each crane clearly identifying all items lubricated and serviced.
